Get Ready for the A00-240 Exam:

Prepare effectively for the A00-240 exam using reliable [study strategies and methods](#). Enhance your preparedness, deepen your understanding of the Advanced Analytics, and enhance your likelihood of achieving success in the SAS Certified Statistical Business Analyst Using SAS 9 - Regression and Modeling with our comprehensive guide. Embark on your path to exam excellence today.

Know More About the SAS Certified Statistical Business Analyst Using SAS 9 - Regression and Modeling Certification:

Exam Name	SAS Statistical Business Analysis Using SAS 9 - Regression and Modeling
Exam Code	A00-240
Exam Duration	120 minutes
Exam Questions	60
Passing Score	68%
Exam Price	\$180 (USD)
Books / Training	Statistics 1: Introduction to ANOVA, Regression, and Logistic Regression Predictive Modeling Using Logistic Regression
Exam Registration	Pearson VUE
Sample Questions	SAS Statistical Business Analysis Regression and Modeling Certification Sample Question
Practice Exam	SAS Statistical Business Analysis Regression and Modeling Certification Practice Exam

Learn More About the A00-240 Syllabus:

Objective	Details
	ANOVA - 10%
Verify the	- Explain the central limit theorem and when it must be applied

Objective	Details
<p>assumptions of ANOVA</p>	<ul style="list-style-type: none"> - Examine the distribution of continuous variables (histogram, box -whisker, Q-Q plots) - Describe the effect of skewness on the normal distribution - Define H0, H1, Type I/II error, statistical power, p-value - Describe the effect of sample size on p-value and power - Interpret the results of hypothesis testing - Interpret histograms and normal probability charts - Draw conclusions about your data from histogram, box-whisker, and Q-Q plots - Identify the kinds of problems may be present in the data: (biased sample, outliers, extreme values) - For a given experiment, verify that the observations are independent - For a given experiment, verify the errors are normally distributed - Use the UNIVARIATE procedure to examine residuals - For a given experiment, verify all groups have equal response variance - Use the HOVTEST option of MEANS statement in PROC GLM to asses response variance
<p>Analyze differences between population means using the GLM and TTEST procedures</p>	<ul style="list-style-type: none"> - Use the GLM Procedure to perform ANOVA <ul style="list-style-type: none"> • CLASS statement • MODEL statement • MEANS statement • OUTPUT statement - Evaluate the null hypothesis using the output of the GLM procedure - Interpret the statistical output of the GLM procedure (variance derived from MSE, F value, p-value R^{*2}, Levene's test) - Interpret the graphical output of the GLM procedure - Use the TTEST Procedure to compare means
<p>Perform ANOVA</p>	<ul style="list-style-type: none"> - Use the LSMEANS statement in the GLM or PLM procedure to

Objective	Details
<p>post hoc test to evaluate treatment effect</p>	<p>perform pairwise comparisons</p> <ul style="list-style-type: none"> - Use PDIFF option of LSMEANS statement - Use ADJUST option of the LSMEANS statement (TUKEY and DUNNETT) - Interpret diffograms to evaluate pairwise comparisons - Interpret control plots to evaluate pairwise comparisons - Compare/Contrast use of pairwise T-Tests, Tukey and Dunnett comparison methods
<p>Detect and analyze interactions between factors</p>	<ul style="list-style-type: none"> - Use the GLM procedure to produce reports that will help determine the significance of the interaction between factors. <p>MODEL statement</p> <ul style="list-style-type: none"> - LSMEANS with SLICE=option (Also using PROC PLM) - ODS SELECT - Interpret the output of the GLM procedure to identify interaction between factors: p-value - F Value - R Squared - TYPE I SS - TYPE III SS
<p>Linear Regression - 20%</p>	
<p>Fit a multiple linear regression model using the REG and GLM procedures</p>	<ul style="list-style-type: none"> - Use the REG procedure to fit a multiple linear regression model - Use the GLM procedure to fit a multiple linear regression model
<p>Analyze the output of the REG, PLM, and GLM procedures for multiple linear regression models</p>	<ul style="list-style-type: none"> - Interpret REG or GLM procedure output for a multiple linear regression model: convert models to algebraic expressions - Convert models to algebraic expressions - Identify missing degrees of freedom - Identify variance due to model/error, and total variance - Calculate a missing F value - Identify variable with largest impact to model - For output from two models, identify which model is better - Identify how much of the variation in the dependent variable is

Objective	Details
	<p>explained by the model</p> <ul style="list-style-type: none"> - Conclusions that can be drawn from REG, GLM, or PLM output: (about H0, model quality, graphics)
<p>Use the REG or GLMSELECT procedure to perform model selection</p>	<ul style="list-style-type: none"> - Use the SELECTION option of the model statement in the GLMSELECT procedure - Compare the different model selection methods (STEPWISE, FORWARD, BACKWARD) - Enable ODS graphics to display graphs from the REG or GLMSELECT procedure - Identify best models by examining the graphical output (fit criterion from the REG or GLMSELECT procedure) - Assign names to models in the REG procedure (multiple model statements)
<p>Assess the validity of a given regression model through the use of diagnostic and residual analysis</p>	<ul style="list-style-type: none"> - Explain the assumptions for linear regression - From a set of residuals plots, assess which assumption about the error terms has been violated - Use REG procedure MODEL statement options to identify influential observations (Student - Residuals, Cook's D, DFFITS, DFBETAS) - Explain options for handling influential observations - Identify collinearity problems by examining REG procedure output - Use MODEL statement options to diagnose collinearity problems (VIF, COLLIN, COLLINOINT)
<p>Logistic Regression - 25%</p>	
<p>Perform logistic regression with the LOGISTIC procedure</p>	<ul style="list-style-type: none"> - Identify experiments that require analysis via logistic regression - Identify logistic regression assumptions - logistic regression concepts (log odds, logit transformation, sigmoidal relationship between p and X) - Use the LOGISTIC procedure to fit a binary logistic regression model (MODEL and CLASS statements)
<p>Optimize model</p>	<ul style="list-style-type: none"> - Use the LOGISTIC procedure to fit a multiple logistic

Objective	Details
performance through input selection	regression model - LOGISTIC procedure SELECTION=SCORE option - Perform Model Selection (STEPWISE, FORWARD, BACKWARD) within the LOGISTIC procedure
Interpret the output of the LOGISTIC procedure	- Interpret the output from the LOGISTIC procedure for binary logistic regression models: Model Convergence section - Testing Global Null Hypothesis table - Type 3 Analysis of Effects table - Analysis of Maximum Likelihood Estimates table - Association of Predicted Probabilities and Observed Responses
Score new data sets using the LOGISTIC and PLM procedures	- Use the SCORE statement in the PLM procedure to score new cases - Use the CODE statement in PROC LOGISTIC to score new data - Describe when you would use the SCORE statement vs the CODE statement in PROC LOGISTIC - Use the INMODEL/OUTMODEL options in PROC LOGISTIC - Explain how to score new data when you have developed a model from a biased sample
Prepare Inputs for Predictive Model Performance - 20%	
Identify the potential challenges when preparing input data for a model	- Identify problems that missing values can cause in creating predictive models and scoring new data sets - Identify limitations of Complete Case Analysis - Explain problems caused by categorical variables with numerous levels - Discuss the problem of redundant variables - Discuss the problem of irrelevant and redundant variables - Discuss the non-linearities and the problems they create in predictive models - Discuss outliers and the problems they create in predictive models - Describe quasi-complete separation - Discuss the effect of interactions - Determine when it is necessary to oversample data

Objective	Details
<p>Use the DATA step to manipulate data with loops, arrays, conditional statements and functions</p>	<ul style="list-style-type: none"> - Use ARRAYS to create missing indicators - Use ARRAYS, LOOP, IF, and explicit OUTPUT statements
<p>Improve the predictive power of categorical inputs</p>	<ul style="list-style-type: none"> - Reduce the number of levels of a categorical variable - Explain thresholding - Explain Greenacre's method - Cluster the levels of a categorical variable via Greenacre's method using the CLUSTER procedure <ul style="list-style-type: none"> • METHOD=WARD option • FREQ, VAR, ID statement • Use of ODS output to create an output data set - Convert categorical variables to continuous using smooth weight of evidence
<p>Screen variables for irrelevance and non-linear association using the CORR procedure</p>	<ul style="list-style-type: none"> - Explain how Hoeffding's D and Spearman statistics can be used to find irrelevant variables and non-linear associations - Produce Spearman and Hoeffding's D statistic using the CORR procedure (VAR, WITH statement) - Interpret a scatter plot of Hoeffding's D and Spearman statistic to identify irrelevant variables and non-linear associations
<p>Screen variables for non-linearity using empirical logit plots</p>	<ul style="list-style-type: none"> - Use the RANK procedure to bin continuous input variables (GROUPS=, OUT= option; VAR, RANK statements) - Interpret RANK procedure output - Use the MEANS procedure to calculate the sum and means for the target cases and total events (NWAY option; CLASS, VAR, OUTPUT statements) - Create empirical logit plots with the SGPLOT procedure - Interpret empirical logit plots

Objective	Details
Measure Model Performance - 25%	
Apply the principles of honest assessment to model performance measurement	<ul style="list-style-type: none"> - Explain techniques to honestly assess classifier performance - Explain overfitting - Explain differences between validation and test data - Identify the impact of performing data preparation before data is split
Assess classifier performance using the confusion matrix	<ul style="list-style-type: none"> - Explain the confusion matrix - Define: Accuracy, Error Rate, Sensitivity, Specificity, PV+, PV- - Explain the effect of oversampling on the confusion matrix - Adjust the confusion matrix for oversampling
Model selection and validation using training and validation data	<ul style="list-style-type: none"> - Divide data into training and validation data sets using the SURVEYSELECT procedure - Discuss the subset selection methods available in PROC LOGISTIC - Discuss methods to determine interactions (forward selection, with bar and @ notation) - Create interaction plot with the results from PROC LOGISTIC - Select the model with fit statistics (BIC, AIC, KS, Brier score)
Create and interpret graphs (ROC, lift, and gains charts) for model comparison and selection	<ul style="list-style-type: none"> - Explain and interpret charts (ROC, Lift, Gains) - Create a ROC curve (OUTROC option of the SCORE statement in the LOGISTIC procedure) - Use the ROC and ROCCONTRAST statements to create an overlay plot of ROC curves for two or more models - Explain the concept of depth as it relates to the gains chart
Establish effective decision cut-off values for scoring	<ul style="list-style-type: none"> - Illustrate a decision rule that maximizes the expected profit - Explain the profit matrix and how to use it to estimate the profit per scored customer - Calculate decision cutoffs using Bayes rule, given a profit matrix - Determine optimum cutoff values from profit plots - Given a profit matrix, and model results, determine the model with the highest average profit

Prepare with A00-240 Sample Questions:

Question: 1

The LOGISTIC procedure will be used to perform a regression analysis on a data set with a total of 10,000 records. A single input variable contains 30% missing records.

How many total records will be used by PROC LOGISTIC for the regression analysis?

Note:- You can use calculator for this question

- a) 7000
- b) 9000
- c) 7009
- d) 9007

Answer: a

Question: 2

An analyst builds a logistic regression model which is 75% accurate at predicting the event of interest on the training data set. The analyst presents this accuracy rate to upper management as a measure of model assessment.

What is the problem with presenting this measure of accuracy for model assessment?

- a) This accuracy rate is redundant with the misclassification rate.
- b) It is pessimistically biased since it is calculated from the data set used to train the model.
- c) This accuracy rate is redundant with the average squared error.
- d) It is optimistically biased since it is calculated from the data used to train the model.

Answer: d

Question: 3

An analyst is screening for irrelevant variables by estimating strength of association between each input and the target variable. The analyst is using Spearman correlation and Hoeffding's D statistics in the CORR procedure.

What would likely cause some inputs to have a large Hoeffding and a near zero Spearman statistic?

- a) nonmonotonic association between the variables
- b) linear association between the variables
- c) monotonic association between the variables
- d) no association between the variables

Answer: a

Question: 4

Refer to the exhibit:

For the ROC curve shown, what is the meaning of the area under the curve?

- a) percent concordant plus percent tied
- b) percent concordant plus (.5 * percent tied)
- c) percent concordant plus (.5 * percent discordant)
- d) percent discordant plus percent tied

Answer: b

Question: 5

An analyst has determined that there exists a significant effect due to region. The analyst needs to make pairwise comparisons of all eight regions and wants to control the experimentwise error rate.

Which GLM procedure statement would provide the correct output?

- a) `lsmeans Region / pdiff=all adjust=dunnett;`
- b) `lsmeans Region / pdiff=all adjust=tukey;`
- c) `lsmeans Region / pdiff=all adjust=lsd;`
- d) `lsmeans Region / pdiff=all adjust=none;`

Answer: b

Question: 6

A financial analyst wants to know whether assets in portfolio A are more risky (have higher variance) than those in portfolio B.

The analyst computes the annual returns (or percent changes) for assets within each of the two groups and obtains the following output from the GLM procedure:

<i>Levene's Test for Homogeneity of Return Variance</i>					
<i>ANOVA of Squared Deviations from Group Means</i>					
<i>Source</i>	<i>DF</i>	<i>Sum of Squares</i>	<i>Mean Square</i>	<i>F Value</i>	<i>Pr > F</i>
<i>Portfolio</i>	1	217.2	217.2	16.29	0.0005
<i>Error</i>	23	306.7	13.3352		

Which conclusion is supported by the output?

- a) Assets in portfolio A are significantly more risky than assets in portfolio B.
- b) Assets in portfolio B are significantly more risky than assets in portfolio A.
- c) The portfolios differ significantly with respect to risk.
- d) The portfolios do not differ significantly with respect to risk.

Answer: c

Question: 7

Which statement is an assumption of logistic regression?

- a) The sample size is greater than 100.
- b) The logit is a linear function of the predictors.
- c) The predictor variables are not correlated.
- d) The errors are normally distributed.

Answer: b

Question: 8

When selecting variables or effects using SELECTION=BACKWARD in the LOGISTIC procedure, the business analyst's model selection terminated at Step 3.

What happened between Step 1 and Step 2?

- a) DF increased.
- b) AIC increased.
- c) Pr > Chisq increased.
- d) - 2 Log L increased.

Answer: d

Question: 9

A linear model has the following characteristics:

- a dependent variable (y)
- one continuous predictor variables (x1) including a quadratic term (x1²)
- one categorical predictor variable (c1 with 3 levels)
- one interaction term (c1 by x1)

Which SAS program fits this model?

- a)

```
proc glm data=SASUSER.MLR;
class c1;
model y = c1 x1 x1sq c1byx1 /solution;
run;
```
- b)

```
proc reg data=SASUSER.MLR;
model y = c1 x1 x1sq c1byx1 /solution;
run;
```
- c)

```
proc glm data=SASUSER.MLR;
class c1;
model y = c1 x1 x1*x1 c1*x1 /solution;
run;
```
- d)

```
proc reg data=SASUSER.MLR;
model y = c1 x1 x1*x1 c1*x1;
run;
```

Answer: c

Question: 10

Refer to the REG procedure output:

<i>Parameter Estimates</i>						
<i>Variable</i>	<i>DF</i>	<i>Parameter Estimate</i>	<i>Standard Error</i>	<i>t Value</i>	<i>Pr > t </i>	<i>Standardized Estimate</i>
<i>Intercept</i>	1	618.44051	40.03665	15.45	<.0001	0
<i>overhead</i>	1	4.99845	0.00157	3181.24	<.0001	0.99993
<i>scrap</i>	1	2.82667	0.71581	3.95	<.0001	0.00124
<i>training</i>	1	-50.95436	2.82069	-18.06	<.0001	-0.00568

What is the most important predictor of the response variable?

- a) intercept
- b) overhead
- c) scrap
- d) raining

Answer: b

Tips for Success in the SAS Statistical Business Analysis Using SAS 9 - Regression and Modeling Exam:

Familiarize Yourself with the A00-240 Exam Format:

Before starting your study regimen, it's crucial to acquaint yourself with the structure of the A00-240 exam. Take a moment to [review the exam syllabus](#), grasp the test format, and pinpoint the main areas of concentration. Having prior knowledge of the exam's layout will assist you in customizing your study strategy effectively.

Create A Study Timetable for the A00-240 Exam:

To prepare efficiently for the A00-240 exam, devise a study schedule that aligns with your lifestyle and preferred learning approach. Allocate dedicated time slots for studying each day, prioritizing topics according to their significance and your level of proficiency. Maintaining consistency by adhering to your schedule and steering clear of procrastination is imperative.

Diversify Your Study Sources:

Ensure you broaden your study material beyond just one source. Use various resources like textbooks, online courses, practice exams, and study guides to understand the A00-240 exam subjects thoroughly. Each resource provides distinct perspectives and explanations that can enrich your learning journey.

Regular Practice for the A00-240 Exam:

Consistent practice is essential for effective preparation for the A00-240 exam. Engaging in regular practice enables you to strengthen your grasp of essential concepts, improve your problem-solving abilities, and become accustomed to the exam format. Allocate dedicated time to solving practice questions and sample tests to assess your progress accurately.

Allow for Rest and Breaks:

While studying is crucial, taking breaks and rest is equally vital. Pushing yourself too hard without sufficient rest can result in burnout and reduced effectiveness. Incorporate short breaks into your study sessions to recharge and stay focused.

Maintain Organization Throughout Your A00-240 Exam Preparation:

Keep yourself organized as you prepare for the A00-240 exam by monitoring your progress and managing your materials effectively. Ensure your study area remains neat, utilize folders or digital aids to arrange your notes and resources, and develop a checklist of topics to review. Employing an organized approach will assist you in staying focused and reducing stress levels.

Seek Guidance from Mentors:

Feel free to ask for clarification when you come across confusing or difficult concepts during your study sessions. Seek support from peers, instructors, or online forums to address any uncertainties. Addressing doubts will prevent misunderstandings and ensure you develop a strong [understanding of the material](#).

Regular Review is Crucial for the A00-240 Exam:

Frequent revisiting of material is paramount for retaining information over the long term. Revisit topics you've already covered to strengthen your comprehension and pinpoint areas that need further focus. Regular review sessions will [solidify your understanding](#) and enhance your confidence.

Master Time Management for the A00-240 Exam:

Skillful time management is essential on the exam day to ensure you finish all sections within the designated time limits. During your practice sessions, replicate the conditions of the A00-240 exam and practice managing your time accordingly. Formulate strategies for efficiently addressing each section to optimize your score.

Have A Positive Mindset:

Finally, maintain a positive attitude and have faith in your capabilities. Stay confident in your preparation and trust that you are well-prepared to handle the A00-240 exam. Envision success, remain focused, and approach the exam calmly and objectively.

Benefits of Passing the A00-240 Exam:

- Completing the A00-240 exam unlocks pathways to fresh career prospects and progression within your industry.
- The extensive preparation needed for the A00-240 certification equips you with comprehensive knowledge and practical expertise applicable to your field.

- Possessing the A00-240 certification showcases your mastery and dedication to excellence, garnering acknowledgment from both peers and employers.
- Certified professionals often command higher salaries and have greater potential for earning than those without certification.
- Acquiring the A00-240 certification validates your competence and trustworthiness, fostering confidence among clients, employers, and peers.

Explore the Trusted Practice Exam for the A00-240 Certification:

At analyticsexam.com, you'll find comprehensive resources for the A00-240 exam. Our platform offers authentic practice exams tailored specifically for the A00-240 certification. What advantages do these practice exams provide? You'll encounter genuine exam-style questions expertly crafted by industry professionals, allowing you to improve your performance in the exam. Rely on analyticsexam.com for rigorous, unlimited access to [A00-240 practice exams](#) for two months, allowing you to boost your confidence steadily. Through focused practice, numerous candidates have successfully streamlined their path to achieving the SAS Certified Statistical Business Analyst Using SAS 9 - Regression and Modeling.

Final Remarks:

Preparing for the A00-240 examination demands commitment, strategic planning, and efficient study methods. Implementing these study suggestions can enrich your preparation, elevate your self-assurance, and increase your likelihood of excelling in the exam. Keep your focus sharp, maintain organization, and believe in your abilities. Best of luck!

Here Is the Trusted Practice Test for the A00-240 Certification

AnalyticsExam.Com is here with all the necessary details regarding the A00-240 exam. We provide authentic practice tests for the A00-240 exam. What do you gain from these practice tests? You get to experience the real exam-like questions made by industry experts and get a scope to improve your performance in the actual exam. Rely on AnalyticsExam.Com for rigorous, unlimited two-month attempts on the [A00-240 practice tests](#), and gradually build your confidence. Rigorous practice made many aspirants successful and made their journey easy towards grabbing the SAS Certified Statistical Business Analyst Using SAS 9 - Regression and Modeling.
